CORE STACK

React JavaScript HTML/CSS Node.js

Capacitor Java (Android) Gradle

Electron WebRTC REST OAuth

GitHub API Vercel Git

SPECIALTIES

- **Android/Capacitor** — native Java plugins: download managers, file providers, install intents
- **API integration** — rate limits, retry with exponential backoff, graceful 503 handling
- **Frontend/React** — complex state, real-time updates, 9500+ line single-file apps
- **Caching & offline** — localStorage, 24h TTL in-memory caches, instant loads
- **Real-time** — P2P messaging and chat without a server (WebRTC)
- **Backend** — REST design, proxy servers, OAuth token flow
- **Deployment** — GitHub Releases to APK, Vercel, Gradle builds

PROFILE

Independent software engineer and AI professional from Algiers. I design, build and ship complete products end-to-end — native Android apps, P2P sync engines, GitHub-powered stores and product websites. Offline-first philosophy: everything runs on the device, nothing breaks on a bad signal.

AI professional. I build AI into products, not just around them: the on-device Mood AI in KIZ Player, LLM-based research and debugging pipelines, prompt design. AI where it makes the product faster and better.

WHAT I CAN BUILD

Websites & web apps

frontend + real backend, VPS, domain or serverless

AI features

on-device models, LLM integration, prompt systems

Trading tools

data analytics, indicators, 24/7 market bots

APIs & automation

REST, webhooks, retry/caching logic

Android apps

native Java + Capacitor, APK releases from GitHub

Telegram bots

payments, automation, support on autopilot

P2P & real-time

WebRTC sync and chat with no server

Domains & hosting

DNS, SSL, deployment, product sites

PROJECTS

LostNote — Capacitor + Electron + WebRTC

- Offline-first notes: local photos, PDF export, PIN-locked vault, trash with undo
- Phone ↔ PC sync over WebRTC with one 5-digit code — no account, no server
- Live product site for the app (v1.2.0)

GitSearch — React + Capacitor + Java plugins

- GitHub explorer: repo search, in-app README, dev chat, achievements
- Built-in APK store backed by GitHub Releases; JavaScript + Java native integration
- 48 releases shipped in ~2 months (v1.0.0.48)

KIZ Player — Java + Capacitor, v1.0.2

- Native Android music player: on-device Mood AI, YouTube downloads, full-screen visualizer
- 100% native core, no webview — works with zero signal and no account

MILESTONES

2026 — First Android app with Capacitor went from idea to a working Capacitor build, then to native Java plugins (download managers, file providers, install intents).

P2P sync engine designed phone ↔ desktop WebRTC sync with a 5-digit pairing code, syncing archive and trash exactly as they are.

APK store inside an app built a store tab that lists, downloads and installs APKs straight from GitHub Releases.

48 releases in ~2 months two products, continuous shipping, product sites and real users.

EXPERIENCE

Independent Software Engineer — Algiers • present

- Ship products end-to-end: product, UI, backend, API integration, deployment
- Own QA, debugging and release pipelines — no teams, no excuses
